AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor where the used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, noninsulin dependent diabetes mellitus, hyperglycemia, constipation,
                                                                                                                                                                                                                                                                                                                               120

The invention relates to an isolated G-protein coupled receptor

C polypeptide, AXOR35, (and its homologues and variants) and its encoding

C polypeptide (and its homologues, variants, complements and RNA

C equivalents). Also included are an anti-AXOR35 antibody, an AXOR35

C equivalents). Also included are an anti-AXOR35 antibody, an AXOR35

C equivalents). Also included are an anti-AXOR35 antibody, an AXOR35

C expression vector, producing a recombinant host cell by introducing the

Vector into a cell such that the host cell produces AXOR35, a membrane of

the host cell expressing AXOR35, identifying/ Screening for agonists or

antagonists of AXOR35 and inhibiting or promoting the function of

by administering to the patient AXOR35 agonists or antagonists. The

agonist or antagonist identified is useful for treating a disease such as

c asthma, or for inhibiting or promoting the function of lymphocytes,

macrophages, eosinophils, or neutrophils in diseased tissue such as an

c asthmatic lung. AXOR35 or polymucleotide is useful in diagnostic assays,

con identifying compounds that are agonists or antagonists of AXOR35, as

cc vaccines, or for treating infections (bacterial, fungal, protozoan or

c viral infections), transplant rejection, gastrointestinal disease),

cc viral infections), transplant rejection, gastrointestinal disease),

cc irritable bowel syndrome, vomiting, inflammation (such as atopic

dermatitis), allergy, autoimmune disocates (such as chematoid arthritis,

psoriasis), urological diseases (such as rheumatoid arthritis,

cardiovascular diseases (such as uninary retention),

chypertension, pulmonary disonders (such as chronic obstructive pulmonary

dispanse)

chypertension, pulmonary disonders (such as rheumatoid arthritis,

chypertension, pulmonary disonders (such as rheumatoid arthritis)

The invention relates to a human G protein-coupled receptor (GPCR)

The invention relates to a human G protein-coupled receptor (GPCR)

C appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA93274) named

CC hARE-3, hARE-4, hARE-5, hRUP3, hRUP07, hGRCRZ1, hARE-1, hARE

CA loo included are a plasmid comprising a vector and one of the CDNAs

CC above and a host cell comprising the plasmid. The GPCRs are useful for

the direct identification of candidate compounds as inverse agonists,

CC agonists or partial agonists. In vitro and in vivo systems incorporating

CC GPCRs is useful for elucidating and understanding the roles these

CC receptors play in the human condition, both normal and diseased, as well

CC sunderstanding the role of constitutive activation as it applies to

Understanding the signalling cascade. The CDNAs are useful for making a

CC understanding the signalisis against tissue mRNA and/or RT-PCR

CC dentification of the expression of the receptor in tissue samples. The

CC present sequence is a CDNA encoding a GPCR of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240

The present invention relates to a new G-protein coupled receptor (GPCR) polypeptide comprising greater than 70% amino acid sequence identity to the amino acid sequence of human GPCRs TGR62, TGR21, TGR130.2, human TGR213 or TGR22, 80% amino acid sequence identity to mouse TGR18 or 90% amino acid sequence identity to mouse TGR18 or cefined in the specification. The GPCR covalently linked to a solid phase is useful for identification. The GPCR covalently linked to a solid phase correction motivates and sequence accompand that modulates signal transduction. The identified compounds are useful for treating kidney disease, cerebral cavernous malformations, hyperlipidemia, obesity, dyslexia and cardiac myxoma. The molecules of the invention are useful for diagnosing curinary abnormalities, renal tubule defects, hypertension and cardiac unfiltrations, lasions, functional disorders and jaundice and spleence associated disorders and others. Modulation of the polypeptide of the invention is useful to treat or prevent any of the above conditions or diseases. The present mucleic acid sequence is that of the human GPCR TGR62 gene located on chromosome 18p11 and encodes the human GPCR TGR62 protein of the invention. Abrilled to a protein of the invention of the invention. Abrilled to a protein of the invention of the inventi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 AIGICGGAGICTAACAGTACTGGCATCTTGCCACCAGCTGCTCAGGTCCCCTTGGCATTT

This sequence represents a polynucleotide encoding a novel human G protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCRs, protein-coupled receptor (GPCR) designated nGPCR-2067. Like all GPCRs, nGPCR-2067 has 7 putative transmembrane domains and is involved in signal transduction. The invention also relates to expression vectors and host cells comprising nucleic acids encoding nGPCR-2067, to recombinant cells comprising nucleic acids encoding nGPCR-2067, to recombinant cells comprising methods that use nGPCR-2067, and to modulators of nGPCR-2067 activity. nGPCR-2067 nucleic acid sequences may be used to isolate nGPCR-2067 allelic variants and species homologues and may also be used in CC genetic mapping. The invention also discloses the use of nGPCR-2067 nucleic acids in screening for a predisposition to nGPCR-2067-associated nucleic acids may additionally be used to generate transgenic nucleic acids may additionally be used to generate transgenic animals, including knockout animals, which may provide an insight into treating a variety of human disorders, and may also be used in the design of antisense molecules for suppressing expression of nGPCR-2067 in cells. CG antisense molecules for suppressing expression of nGPCR-2067 in cells. CG medical conditions, particularly mental disorders, central nervous system diseases, and metabolic diseases. Diseases that may be treated

The present invention describes antigenic peptides (I) comprising: (a) any one of 1601 sequences (see ABP82019 to ABP83619) of 12-24 amino acids. Also described: (I) an assay for the detection of a particular G protein-coupled receptor (GPCR) or a candidate polypeptide in a sample; and (2) an isolated antibody having high specificity and high affinity or avidity for a particular GPCR. (I) can be used as GPCR modulators and in gene therapy. The antigonic peptides for GPCRs are useful in detecting an antibody against a particular GPCR, and in the production of specific antibodies. The peptides and antibodies are also useful for detecting the

CC GPGRs and antibodies are useful for diagnosing and designing drugs for treating immune-related diseases, growth-related diseases, coll creating immune-related diseases, growth-related diseases, cell regeneration-related diseases, immunological-related cell proliferative diseases, or autoimmune diseases, e.g. AIDS, AIZheimer's disease, catherosteleosis, bacterial, fungal, protozoan or viral infections. CC atheroscies, bacterial, fungal, protozoan or viral infections, osteoporosis, cancer, cardiomyopathy, chronic and acute inflammation, allergies, Crohn's disease, diabetes, graft versus host disease, Parkinson's disease, multiple sclerosis, pain, psoriasis, anxiety, depression, schizophrenia, dementia, mental retardation, memory cost, epilepsy, asthma, tuberculosis, obesity, nausea, hypertension, hypotension, renal disorders, rheumatoid arthritis, trauma, ulcers, or my other disorders, they depressy and immunodiagnosis, ABZ42523 to ABZ4269 encode GPCR proteins given in ABP81675 to ABP82018, which are used in the exemplification of the present invention

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                              1 atgroggagtotaacagtac.....accagtoagtatottottga 1176

APPLICANT: Andrew D.J. Goodearl and Sandra Glucksman
TITLE OF INVENTION: Muscarinic Receptors and Uses Therefor
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD, LLP
STREET: 28 State Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SOFTWARE: Patentin Release #1.0, Version #1.25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         à                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:
APPLICANT: Andrew D.J. Goodearl and Sandra Glucksman
TITLE OF INVENTION: Miscarinic Receptors and Uses Therefor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              950
